DETAILED ACTION

Response to Amendment

1. This action is issued in response to applicant's Amendment A(Paper #10) filed 12/17/02.
2. New claims 66-67 were added. No claims were deleted. None were amended.
3. Claims 1-67 are pending.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 1-67 are rejected under 35 USC 103(a) as unpatentable over Ordish(US Pat. No: 5,727,165) in view of Gutterman(US Pat. No: 5,297,031) and further in view of SelectNet/SuperSOES(1994).
6. As per claims 1-67 Ordish teaches a method for data management of a financial transaction(Abstract) which receives a request from a user for a proposed transaction(col 5 line 37-66). Ordish teaches a plurality of trading systems(Fig 1). Ordish teaches a trader's rate quote(col 5 line 65-col 6 line 8) as well as entry at a terminal(keystation)(col 5 lines 40-45) and timed match acknowledgement(Abstract) as well as forming counteroffers which include rejecting an initial offer(col 5 line 67-col 6 line 7) and reporting a trade in a period of time(col 6

Art Unit: 3624

lines 30-32) as well as a quote good for a known period of time(col 7 lines 14-19). Gutterman teaches timed open orders(col 4 lines 18-19) and that a workstation FIFO buffer receives orders from an entry system(col 7 lines 37-52)(col 8 lines 33-37).Gutterman further teaches market, contingency, stop, sell stop,stop limit, market if touched, alternative, scale, and contingent orders and spreads(col 3 line 25-col 4 line 65) in the quote process.Gutterman teaches generating a rate quote consisting of one executable rate quote(col 1 lines 32-36) as well as time-stamping orders(col 2 lines 60-65) as well as orderly execution(col 3 lines 11-30) as well as entry at a terminal through a computer and ending with a printer(col 2 lines 65-68).Selectnet/SuperSOES teaches an order execution system for small as well as large orders(Pages 1-4) where deals are limited to certain sizing requirements where deals in larger sizes can be consummated under SuperSOES with a specified rate quote(Page 1)(Page 2)(Page 5)(Table I).

It would have been obvious to one skilled in the art at the time of the invention to combine Ordish in view of Gutterman to teach the above. The motivation to combine is to teach a system for efficient executions between the trading floor and a plurality of customers as enunciated by Gitterman(col 5 lines 49-55).It would have been obvious to one skilled in the art at the time of the invention to combine Ordish in view of Gutterman and further in view of SOES/SuperSOES to teach the above. The motivation to combine is to teach a system for efficient data managementfor financial transactions and large block/small block trading as depicted by SOES/Super SOES.
